

## What does 'REDD+ Finance' mean?

No strict definition, but commonly admitted as:

Finance with primary objective to support REDD+ and/or clearly identified as REDD+ support

It is not the same as '**REDD-relevant**' finance (any finance that supports the reduction of emissions from forest sector = contributing to REDD+ implementation) → very wide!

## Different Types of REDD+ Finance

- **REDD+ Investment:** to implement REDD+(address drivers) and build REDD+ capacity - '*Ex-ante*'
- **Results-based payments (RBPs):** to reward REDD+ results - '*Ex-post*' (mainly)

(2006 - 2014)

Source: adapted from CGD, 2015

## REDD+ Finance Sources

≈ USD 9.8 Billion  
≈ 90% from international public sources

Source: adapted from CGD, 2015  
Data from 2006 - 2014

Finance sources will have to expand and diversify through the phases of REDD+, with increasing roles and volumes of:

- Private sector and domestic sources: towards implementation of REDD+
- International public finance for RBPs
