

MRV System Suriname

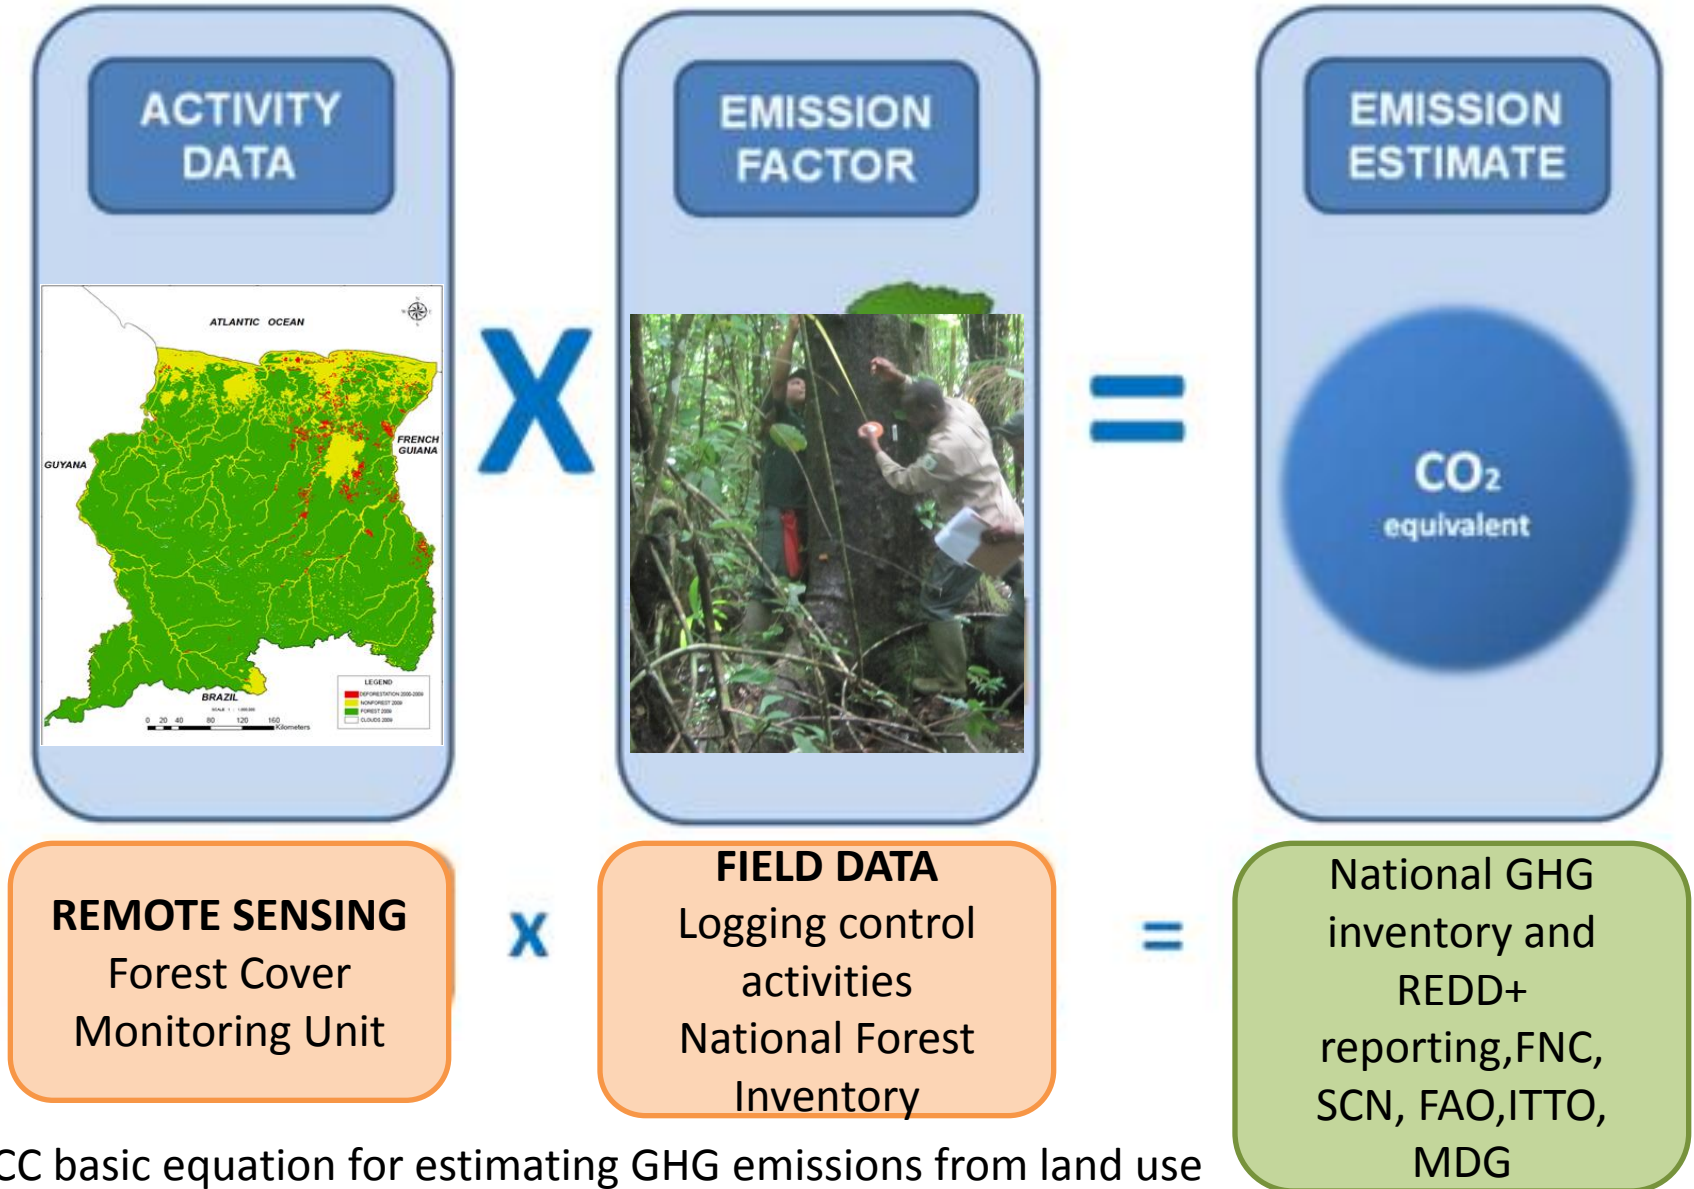

Priscilla Miranda – Panamá,
September 3, 2014

RPP Trajectory

- **REDD+ readiness preparation proposal (R-PP):** *Suriname will establish a **National Forest Monitoring System that includes an MRV function** (measurement, reporting and verification) in line with international REDD+ requirements, as well as monitoring functions for multiple purposes.*
- **RPP-PRODOC:** *"The national forest and carbon monitoring system is set up in a participatory and rights-based manner" (3c). **Responsible institution: SBB***

Components of the MRV system:

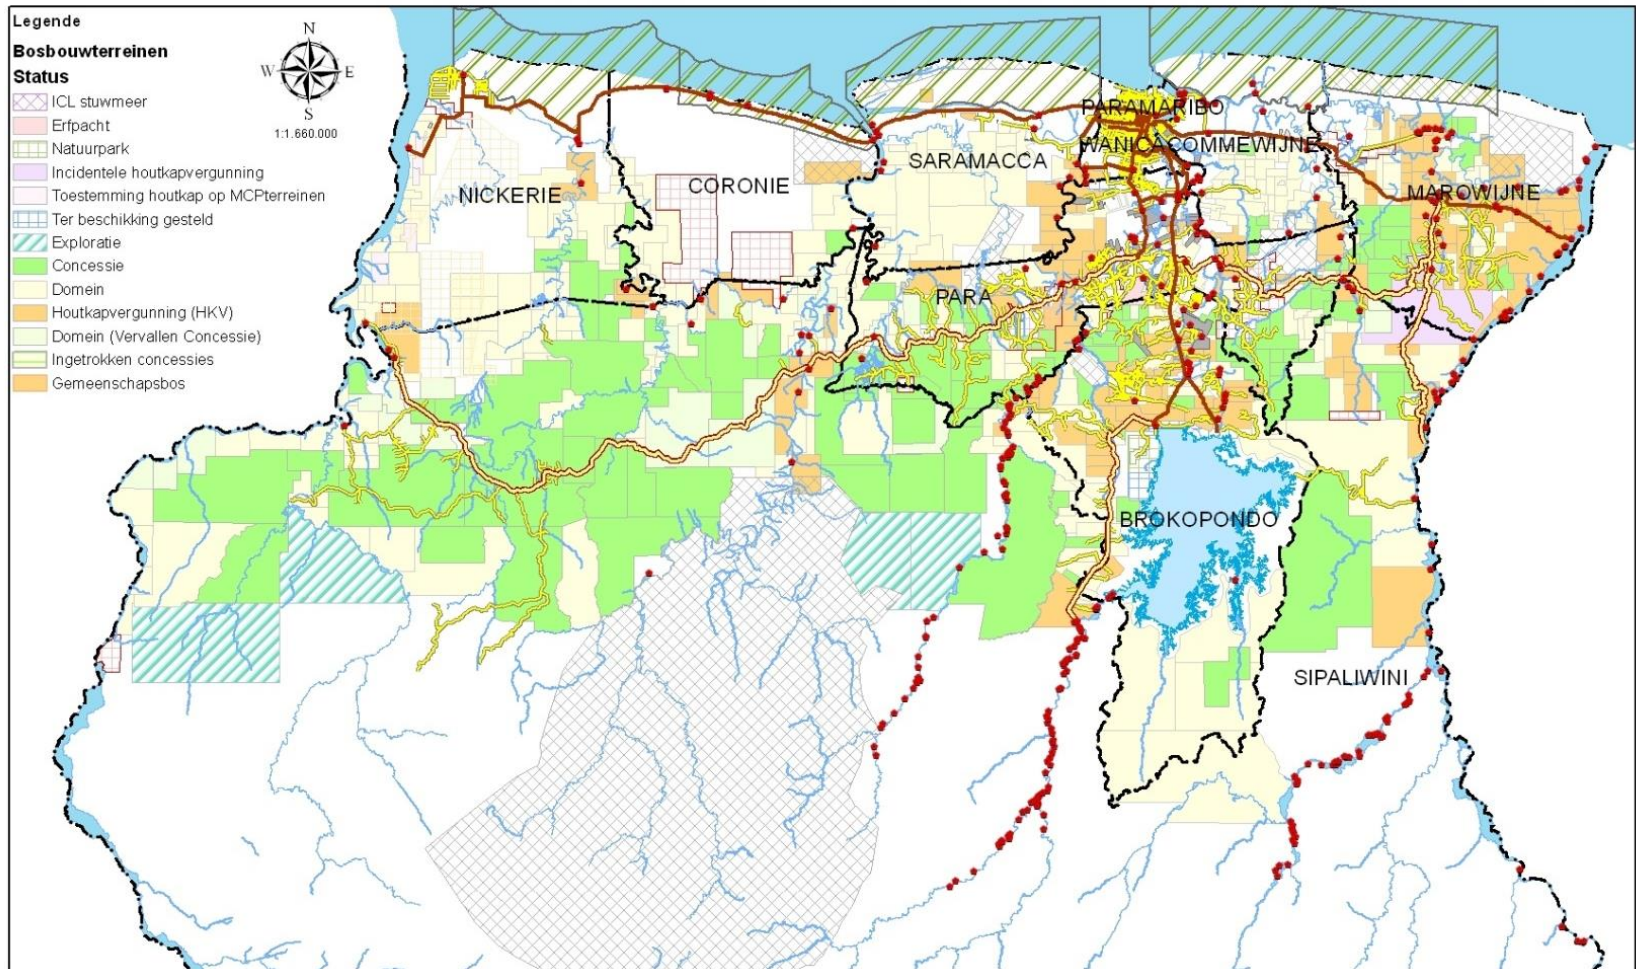

IPCC basic equation for estimating GHG emissions from land use related activities: **Emissions = AD x EF**

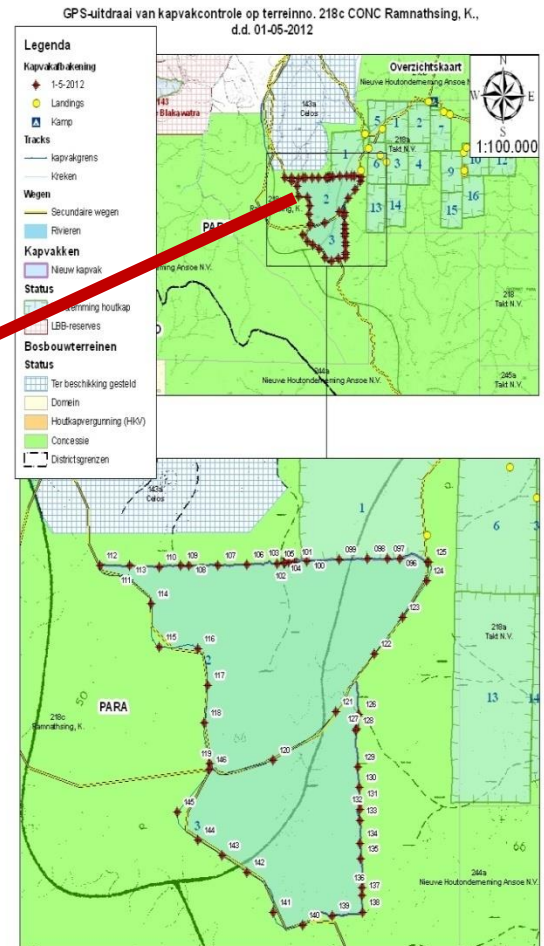

MRV related activities

Sustainable Forest Management 1998

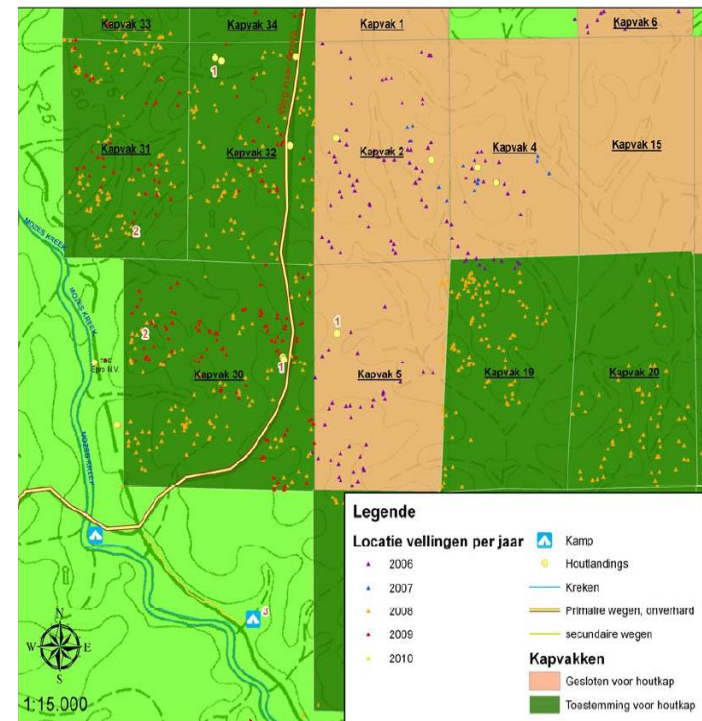

Timber cutting license

Monitoring logging activities GIS/GPS

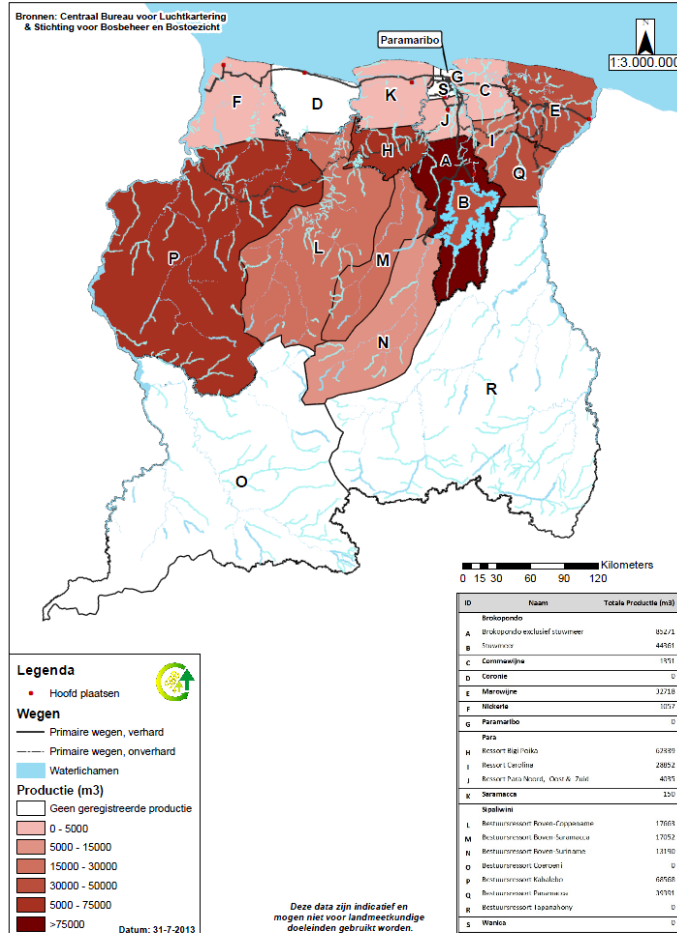

Monitoring logging activities

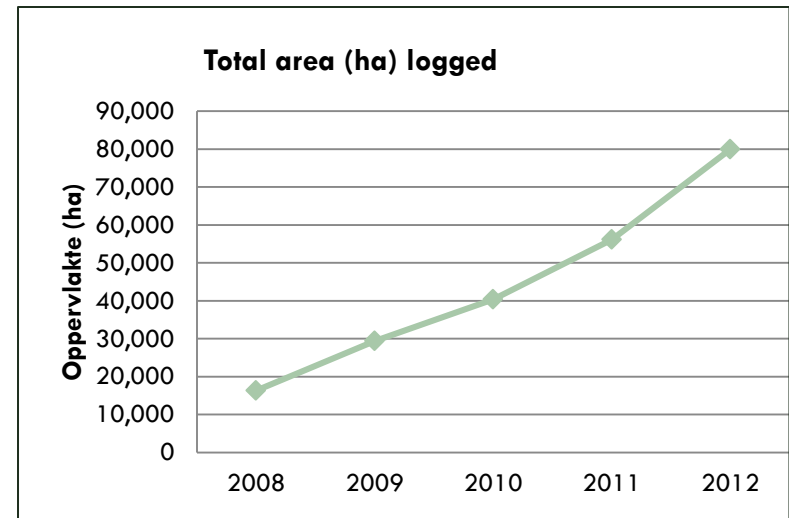

Production statistics

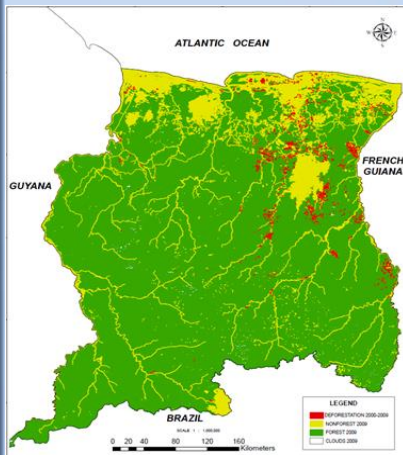

Overzichtskaart van de geregistreeerde rondhoutproductie per regio voor 2012

Type of Cutting Compartment	Amount	Area (ha)
Extensive mananagement	346	62453
Intensive management	220	22571
Total	683	85024

Forest Cover Map 2010

- Min RGB, CI/KfW and local institutions
- Capacity Building
- Basis to update the Map of 1998
- Basis for Spatial planning training

ACTO project: Monitoring Forest Cover Change of the Amazon Rergion

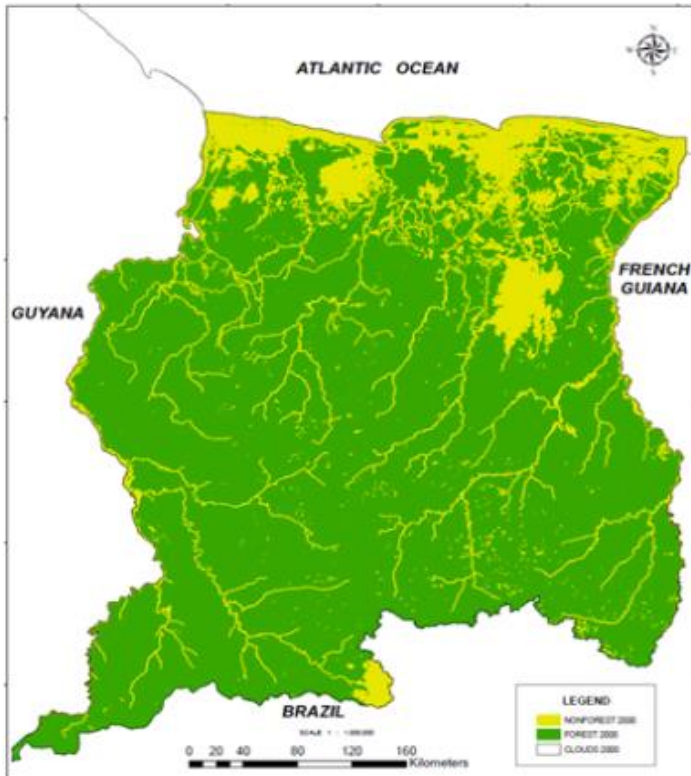

Forest cover Monitoring Unit to provide up to date information about forest cover changes using modern technology

Technical focal point:
Ministry of Physical Planning, Land and Forest Management

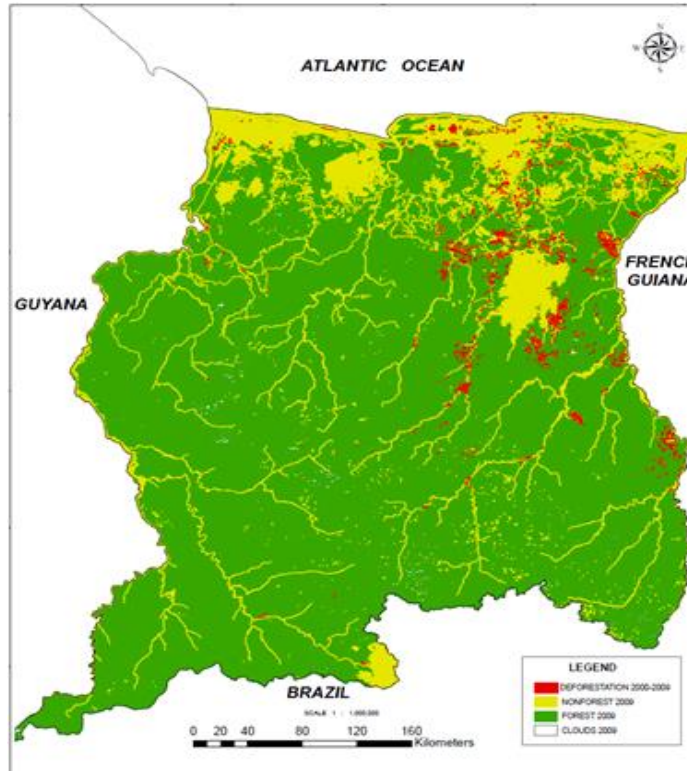

Implementing Agency: SBB

Done so far in terms of collecting activity data

Forest cover
Base map 2000

Deforestation Map
2000-2009

**Preliminary
results:**
Appr: 0,02%
deforestation/yr
Forest cover: 94%

**Future plans:
Forest cover
mapping
and change
monitoring**

Classification system

Agree on national definitions of forest, non-forest and different layers of sub-classes

Benchmark map forest / non-forest

Accuracy assessment and improvement of base map 2000 in line with new definitions

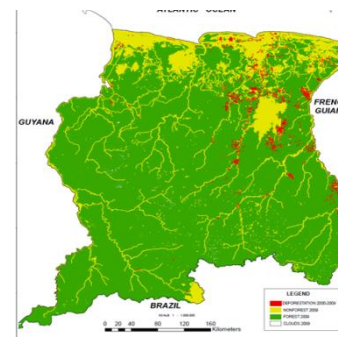

Land Use - Land Cover map

Detailed map for 2013 of all the agreed classes

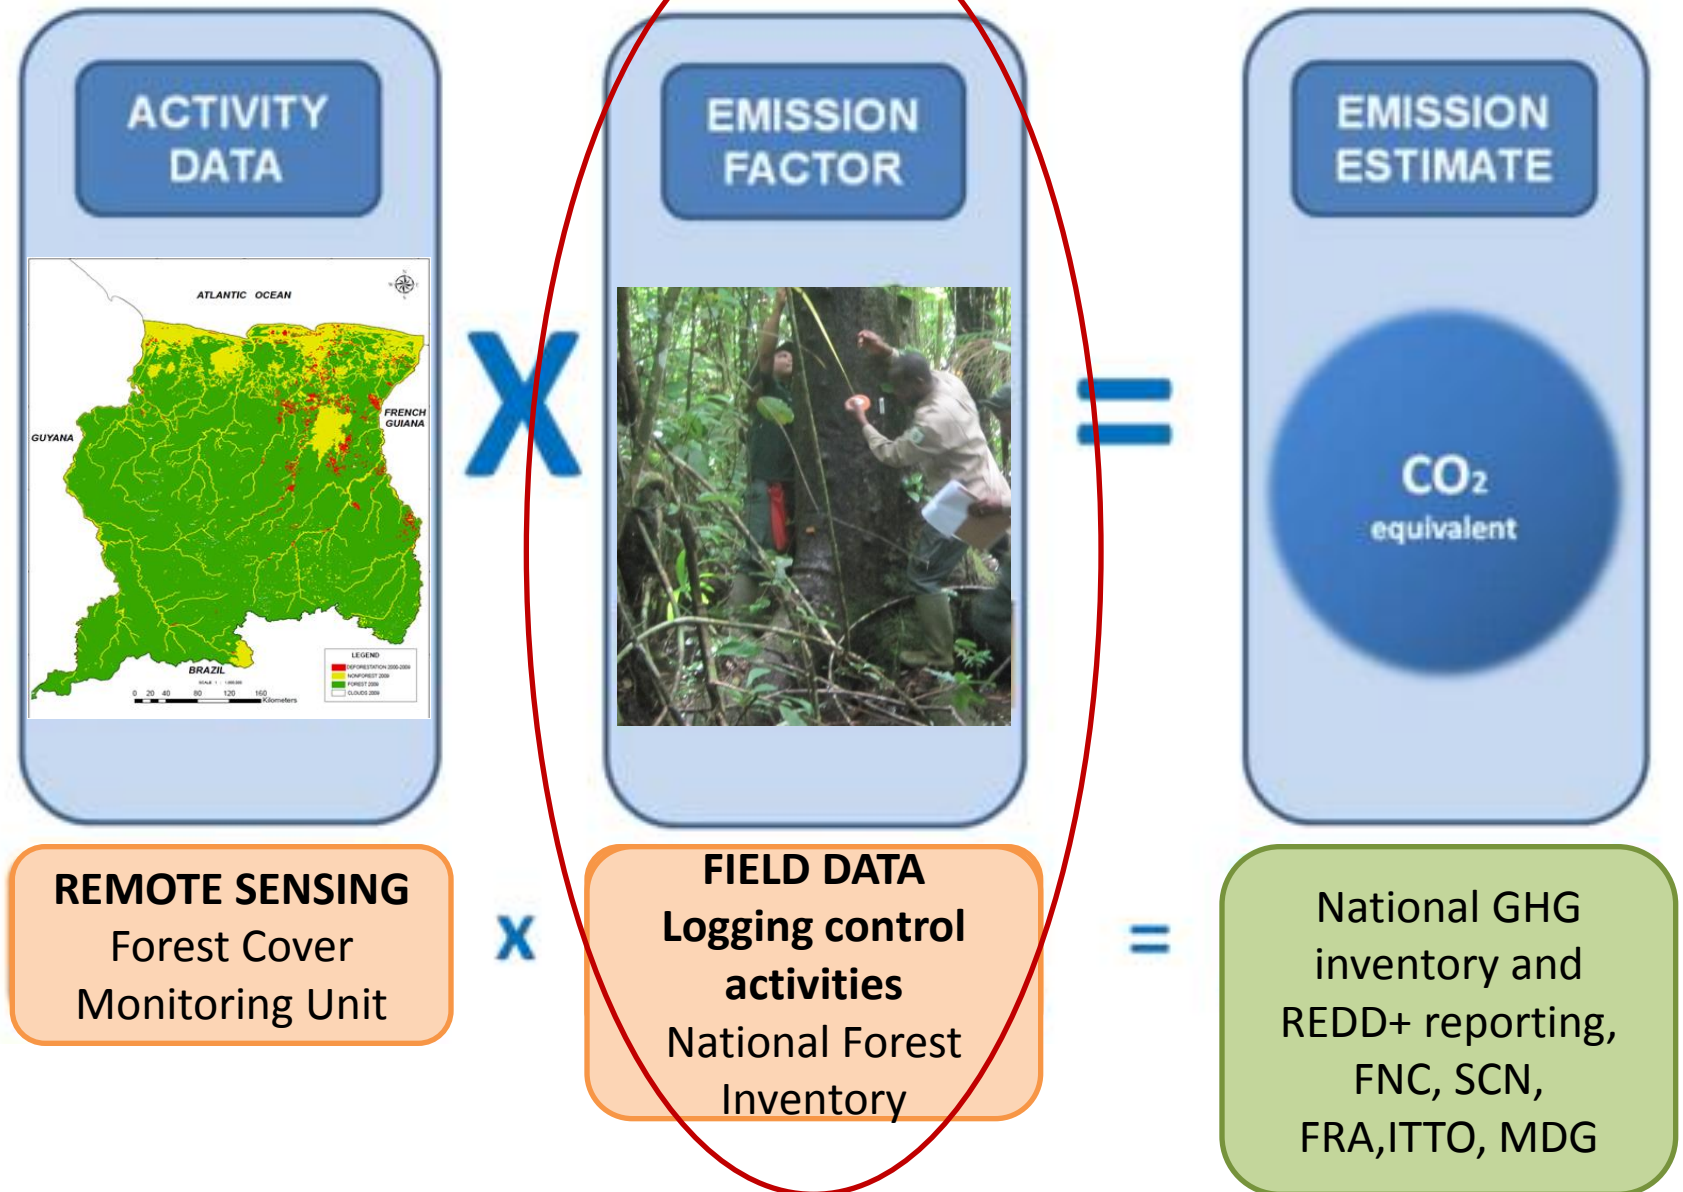

Periodic wall-to-wall monitoring of change:
Deforestation,
Forest regeneration,
Forest degradation

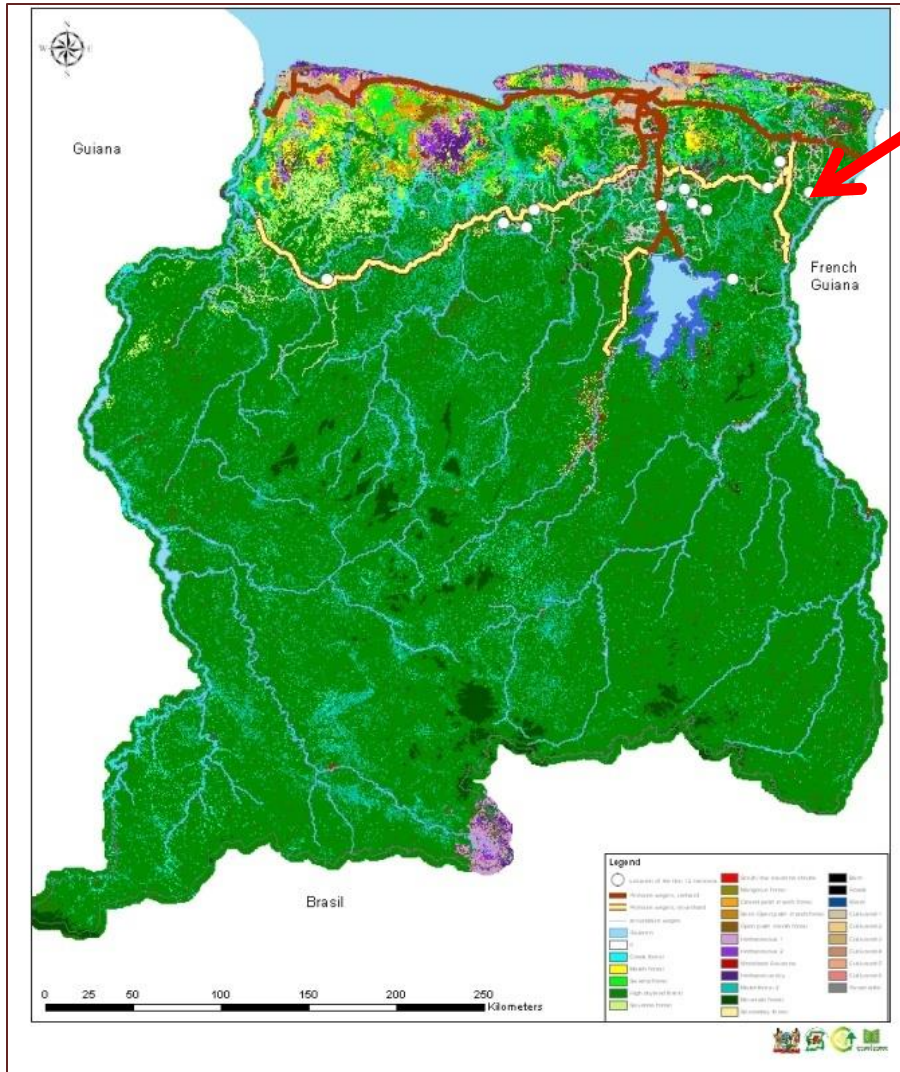

Develop a solid methodology and deliver the following mapping products:

- Deforestation maps every two years
- Regeneration maps less frequently
- Degradation maps starting from 2017

Components of the MRV system:

Forest Carbon Assessment Project 2012

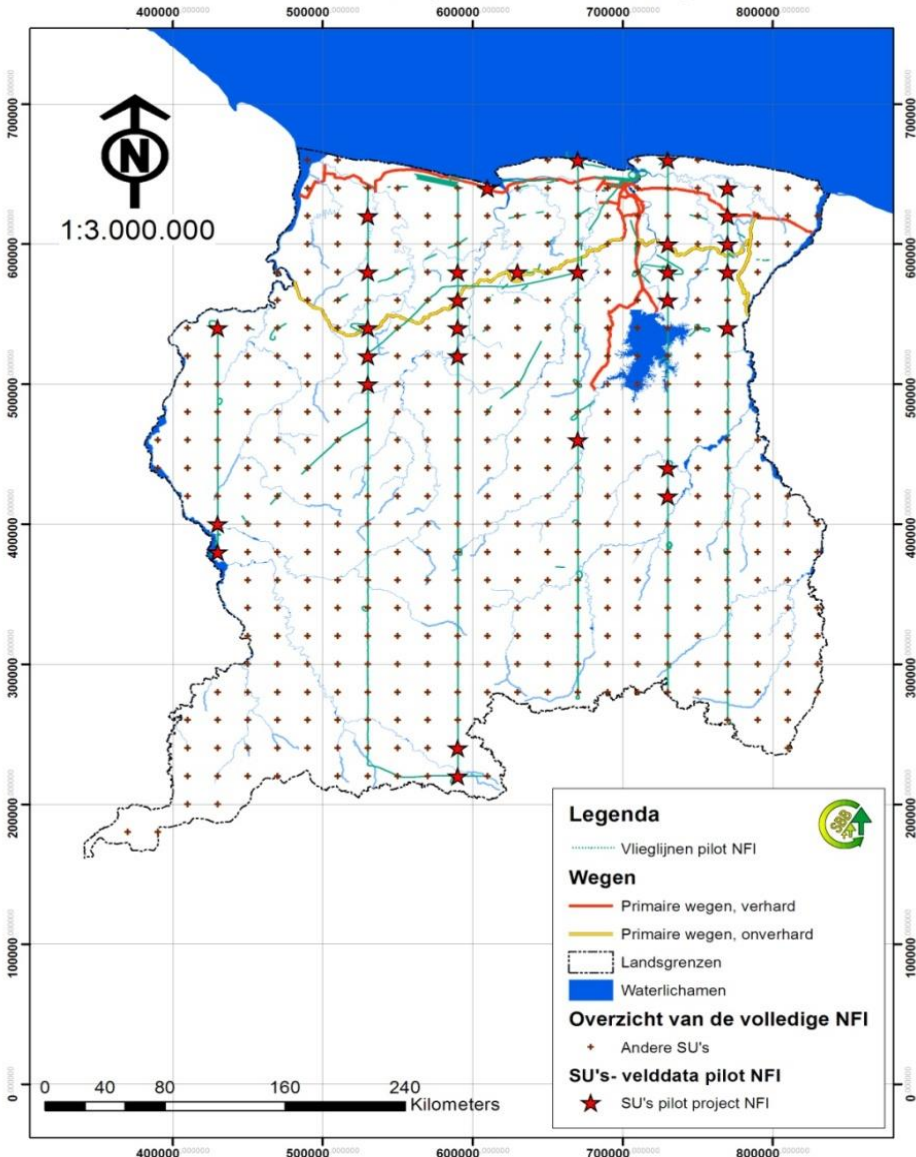

- 12 transects
- capacity building
- Methodology
- First hand/inhouse information
- Experience

Field data collection

Pilot project National Forest Inventory

Overzicht van de Sampling Units van het pilot project NFI

- 29 sample units
- Capacity Building
- New Methodology (Ortho Photos and ground truthing)
- Basis for Comprehensive multi purpose Forest Inventory

Next steps:
More field data collection through a multi-purpose National Forest Inventory

Continue Capacity building, research and consultations

Tools for policy-making, land use planning and REDD+

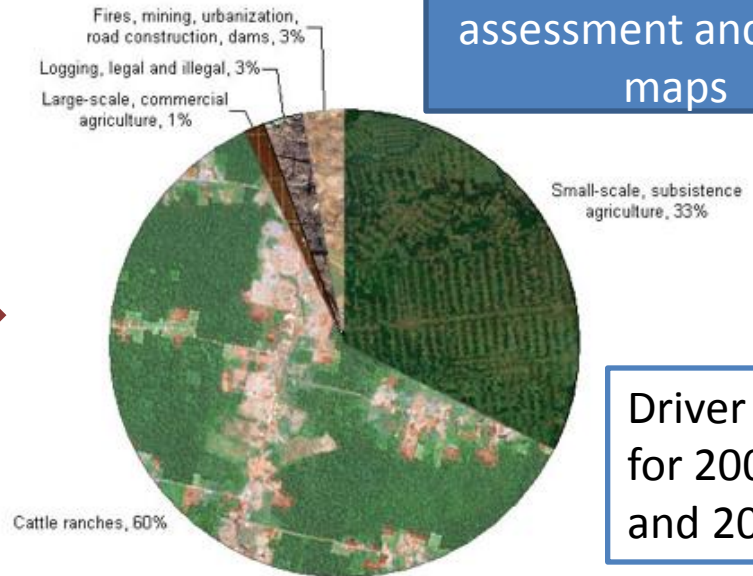

Qualitative assessment of national drivers of deforestation

Understanding the past – present – future causes of deforestation in Suriname

Quantitative assessment and driver maps

Driver maps for 2000, 2009 and 2013

Methodology for monitoring drivers

and

Tool for modelling future deforestation

and

Suitability map for sustainable forest management

Tools for taking action against Unplanned deforestation and forest degradation

Monitoring of
forest fires

Community-based
and participatory
forest monitoring

Near real time
monitoring using
remote sensing

Deforestation
alerts to enable
rapid response

Agriculture – Hinterland (shifting cultivation)

□ Individual fields
