

REDD+ PROGRAM IN PANAMÁ

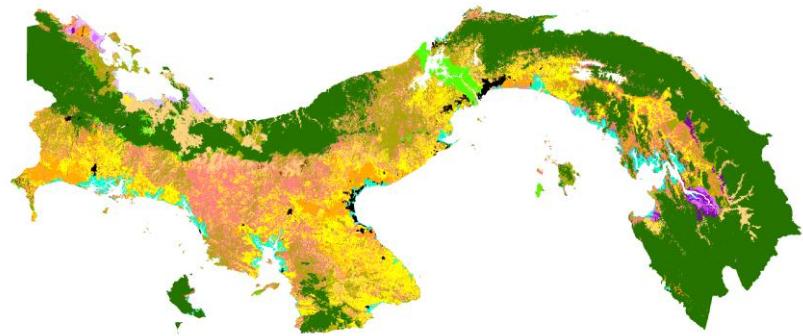

DEVELOPMENT AT A CROSSROAD

PANAMA FOREST COVER

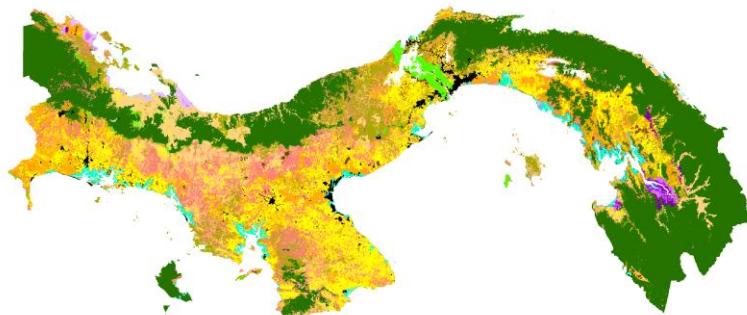

1992- 49%

- Bosque intervenido
- Bosque inundable mixto
- Bosque maduro
- Bosque secundario maduro
- Mangle
- Otros usos
- Plantación forestal
- Rastrojo
- Uso agropecuario
- Uso agropecuario de subsistencia
- Vegetación baja inundable
- Albinas
- Bosque orey homogéneo
- Cativo homogéneo
- Cativo mixto
- Pastos

2000-44%

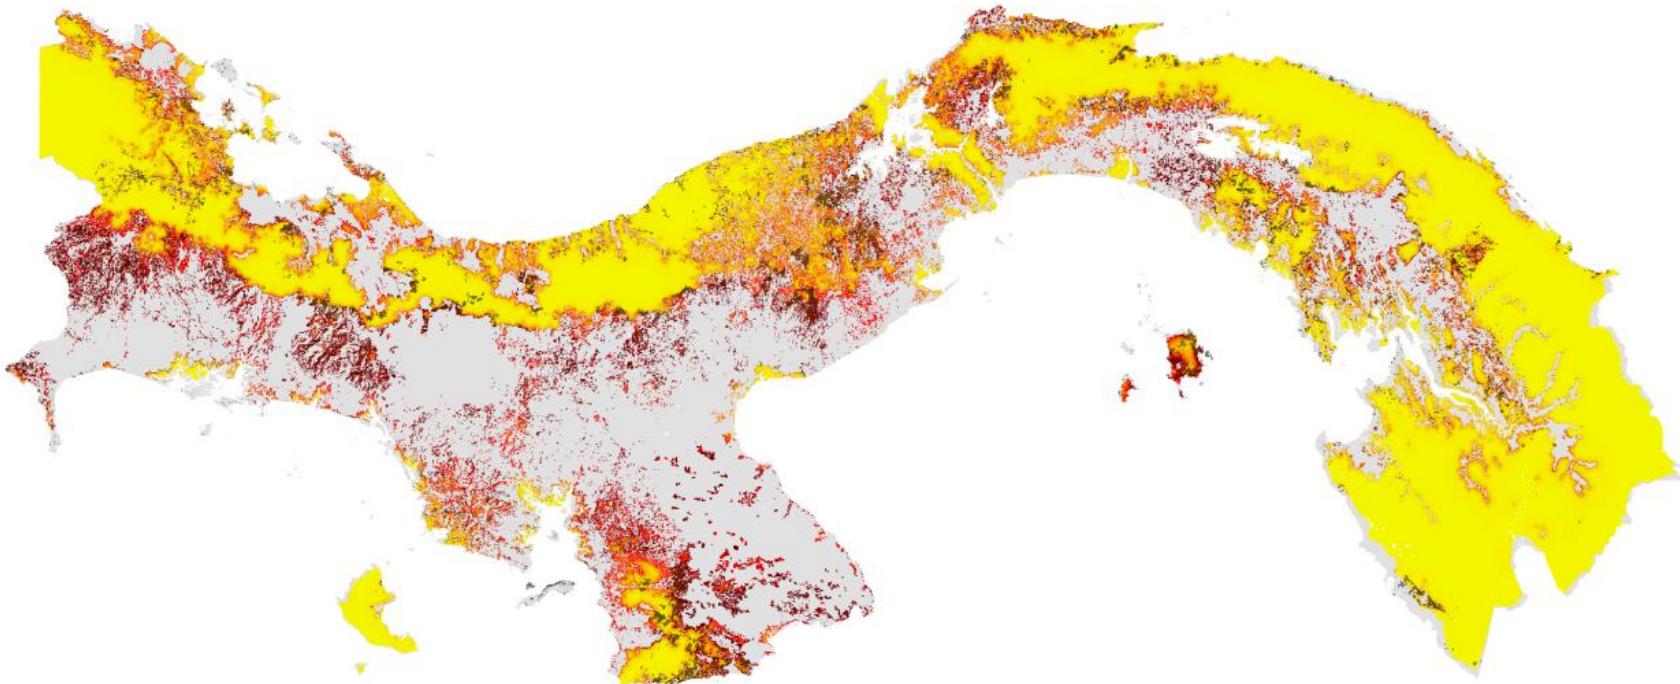

- Bosque intervenido
- Bosque inundable mixto
- Bosque maduro
- Bosque secundario maduro
- Mangle
- Otros usos
- Plantación forestal
- Rastrojo
- Uso agropecuario
- Uso agropecuario de subsistencia
- Vegetación baja inundable
- Albinas
- Bosque orey homogéneo
- Cativo homogéneo
- Cativo mixto
- Pastos

2008- 43%

- Bosque intervenido
- Bosque inundable mixto
- Bosque maduro
- Bosque secundario maduro
- Mangle
- Otros usos
- Plantación forestal
- Rastrojo
- Uso agropecuario
- Uso agropecuario de subsistencia
- Vegetación baja inundable
- Albinas
- Bosque orey homogéneo
- Cativo homogéneo
- Cativo mixto
- Pastos

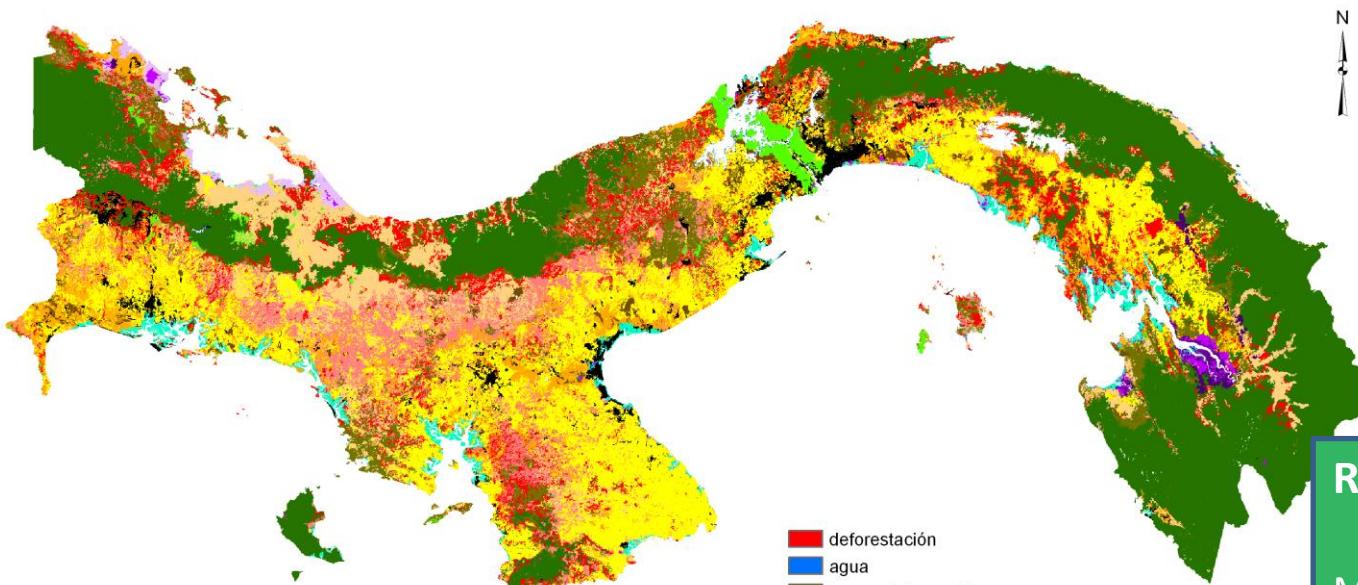

PROBABILITY OF DEFORESTATION - “Inertial” scenario - 2028

The probability of deforestation increases in
the red color areas.

- ◆ Areas under Deforestation risk
- ◆ Bosque
- ◆ Deforestation period 2000-2008

Panamá: Forest Cover 2028-BAU Scenario

Escenario BAU (2028)

- deforestación
- agua
- bosque intervenido
- bosque inundable mixto
- bosque maduro
- bosque secundario maduro
- mangle
- otros usos
- plantación forestal
- rastrojo
- uso agropecuario
- uso agropecuario de subsistencia
- vegetación baja inundable
- albinas
- bosque orej homogéneo
- cativo homogéneo
- cativo mixto
- pastos

Risk factors

Mining
Hydropowers
Roads
Electrical
Interconnection
Livestock
Agriculture (oil palm)
Tourism
Logging

What level of REDD+ payments could we have?

- If we assume a range from 80 – 122 Tn C/Ha
 - Average value 118 TnC/hectarea...
- If we assume a price range of 5-9 US\$ / TnCO₂...
- If we assume that 2/3 of payment will reach people on the ground...

The result is a payment in the order to 72-130 US\$/Ha/yr

What sectors could we influence with this level of payments?

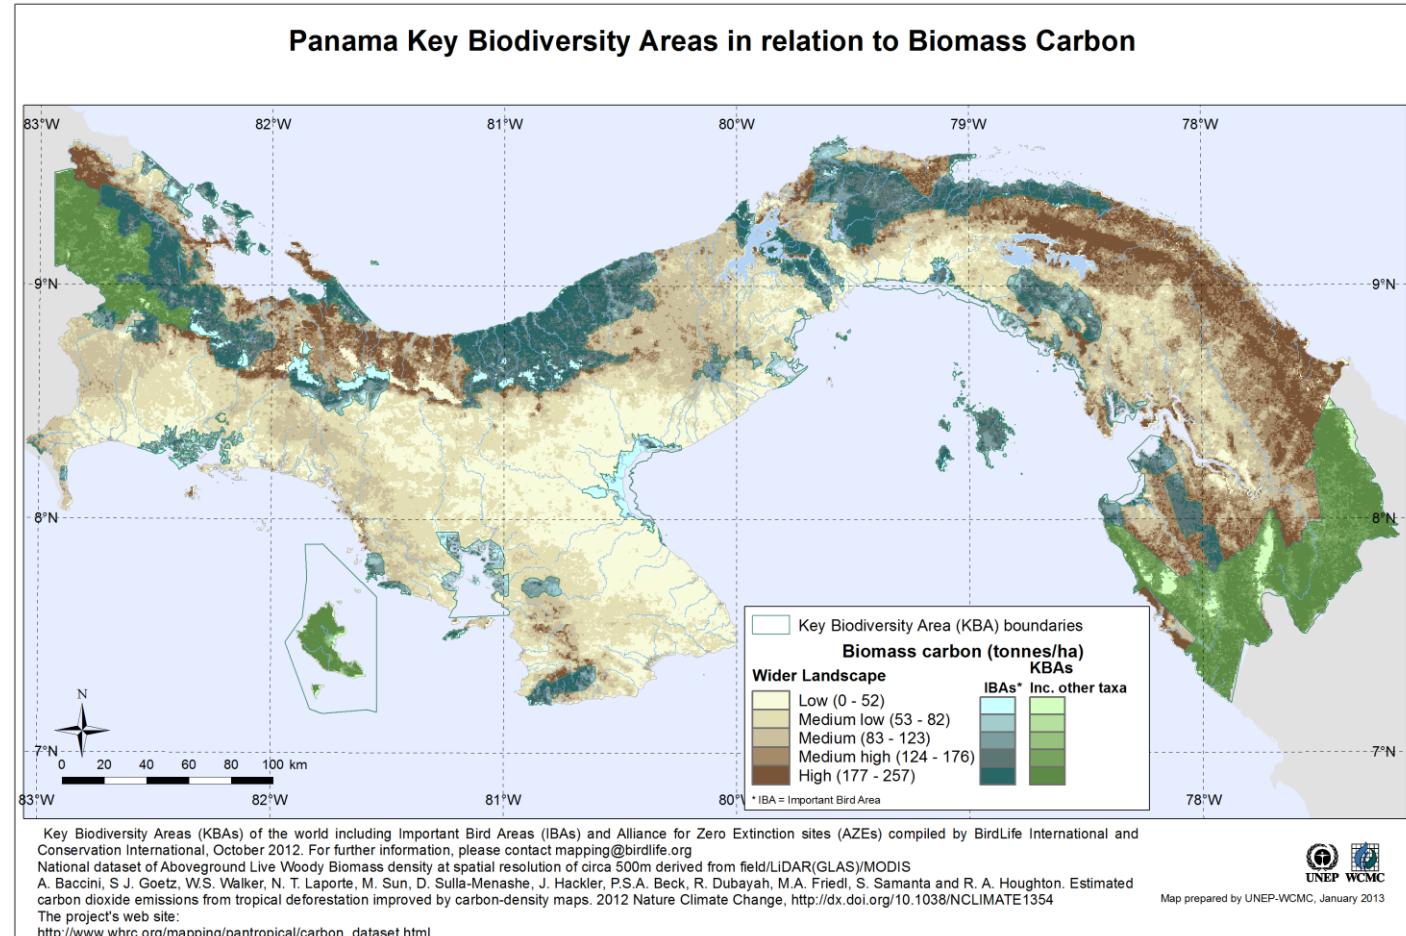

- Subsistence agriculture
- Low productivity livestock
- Not enough to compete with intensive agriculture and intensive livestock.
- Not enough to compete with mining, hydropower, and others similar investments.

How decisions will be made on land use?

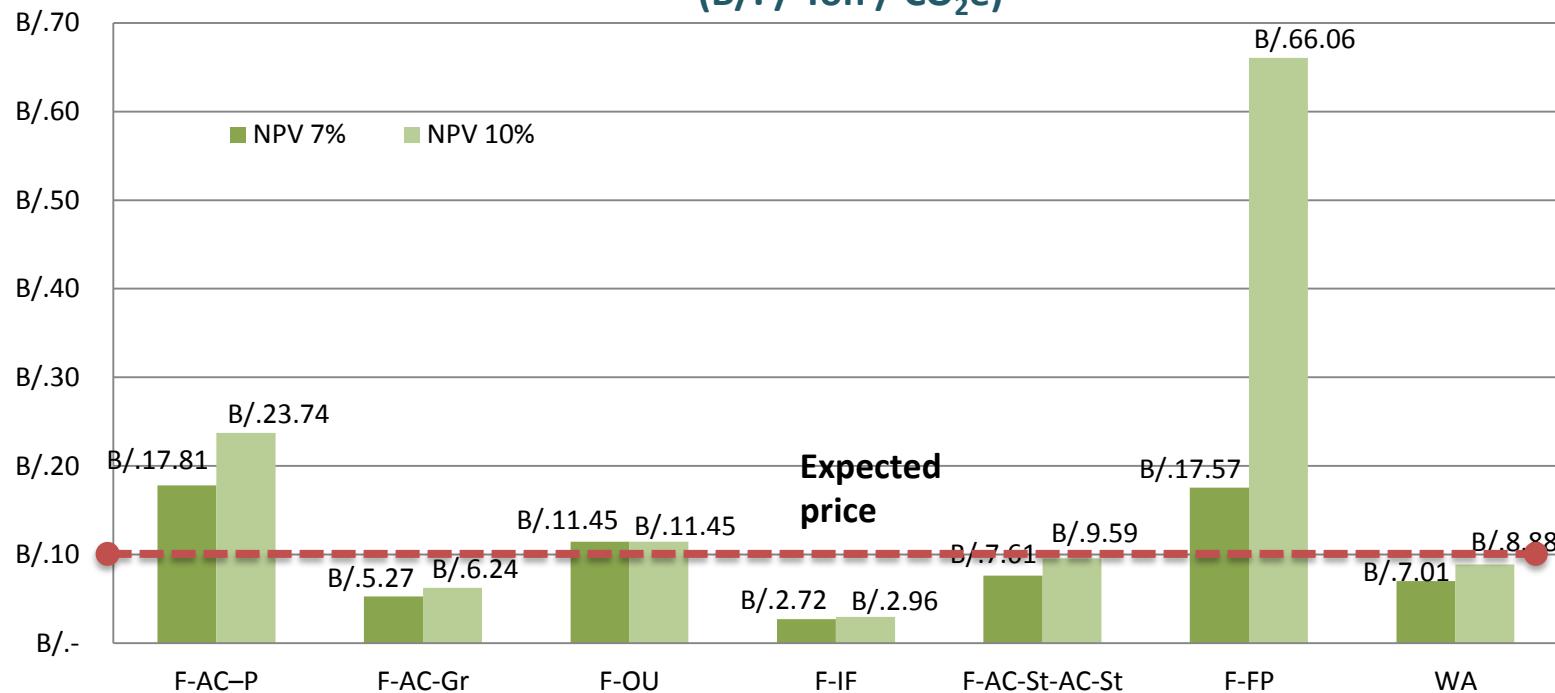

- The public opinion is divided;
- New development models are coming into political discussion.

Carbon and environmental benefits

Costs of REDD+

**Opportunity Cost of main trajectories of change in land use in Bocas del Toro
(B/. / Ton / CO₂e)**

F = Forest

AC = Annual crops

P = Plantations

OU= Other non agricultural uses

IF = Intervened forest

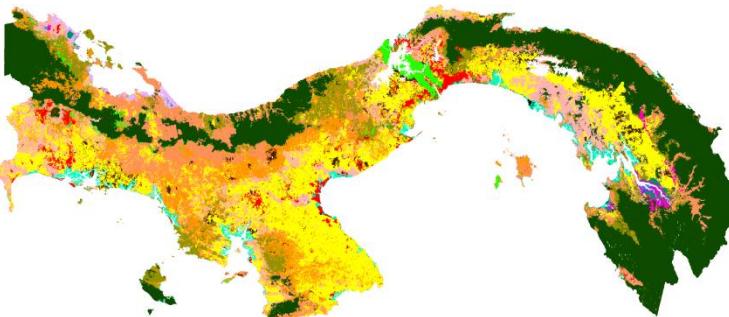

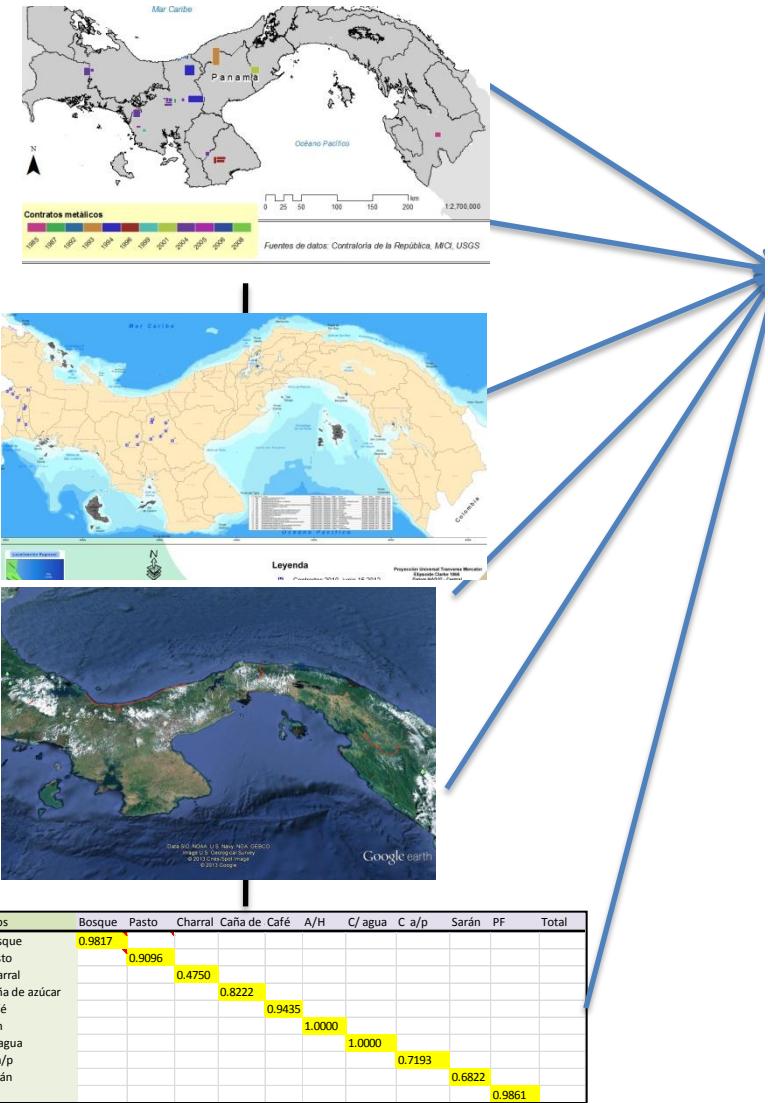

St = Stove

FP = Forest plantation

WA = Weigh average

GR = cattle ranching

A platform to discuss development options

Impacts on
the macro
economy

Spatially explicit results with
associated net present values of
options and macro impacts

Thank you!
