

UN-REDD  
PROGRAMME | REDD+ ACADEMY

7

# Policies and Measures for REDD+ Implementation

# Learning objectives

By the end of this module, you should be able to:

- Define what policies and measures are
- Explain how to identify appropriate policies and measures
- List issues to take into consideration
- Describe how to monitor the impact of PAMs

## Agenda for the session

3

- Introductory presentation on Policies and Measures for REDD+ Implementation
- Q & A
- Country examples
- Q & A
- Group exercise

## What are policies and measures (PAMs)?

- PAMs are interventions to implement REDD+
- PAMs aim to **reduce emissions** or **enhance removals** from forests
  - By addressing direct and indirect drivers and/or barriers
- Drivers / barriers are often **multiple and complex**
  - Require a set, or **package, of PAMs** – rather than a single intervention
- Designing **effective** PAMs requires many considerations

## Examples of PAMs

	REDD+ Activities				
	Red. ems. defor.	Red. ems. degrad.	Cons.	SMF	Enhanc.
Funding fire prevention programmes	✓	✓✓	✓		
Removal of subsidies for deforestation and forest degradation and/or imposition of land clearance taxes	✓✓	✓✓	✓		
Implementation of sustainable biomass energy programmes	✓	✓✓	✓	✓	✓
Support to / enhance community forestry	✓	✓	✓	✓✓	✓
Strengthening of forest law enforcement	✓	✓	✓	✓	✓
Implementation of conservation concessions	✓	✓	✓✓		
Afforestation/reforestation on degraded land				✓	✓✓
Support to forest certification and/or RIL		✓		✓✓	
Land use planning	✓	✓	✓	✓	✓

## Analytical Work

- Analysis of **drivers** and **barriers**
  - Spatial distribution (**where** are the drivers/barriers at work?)
  - **Socioeconomic factors** (e.g. population growth, fuelwood use, law enforcement)
- Analysis of **legal context** and national **development strategies**
  - How does REDD+ fit in?
- Spatial analysis: Land-use planning for REDD+
  - Identify **priority areas** (e.g. areas of threatened forest)
  - Identify areas where **co-benefits** can be promoted (e.g. biodiversity hotspots)
  - Minimize **risks** (through e.g. collaborative planning with local communities)

# PAM Design Considerations

- Priority drivers / barriers
- What PAMs already exist?
  - Understand existing **legal framework** (not just forestry!)
    - *Do PAMs from different sectors overlap...?*
- Approach to stimulate action / change
  - Carrot and/or stick...?

## Policies and Measures for REDD+ Implementation

# PAM Implementation Considerations

- Sources of financing for PAM implementation
  - National budget, international support, other?
- Implementation arrangements
  - **Legal framework**: e.g. are existing laws adequate / implemented effectively?
  - **Institutional framework**: e.g. clear mandates? Technical capacities in place?
- Linking PAMs with safeguards
  - **Choice of PAMs** and **locations** will influence safeguards / SIS
  - Ensuring engagement of **relevant stakeholders** in PAM design
  - PAMs will have different **social, environmental and economic benefits and risks**

## Monitoring of PAM Implementation

- Track implementation
  - **Feedback mechanism** on effectiveness of PAMs
- Assess impact/outcome
  - Assess **other (non-carbon) impacts of PAMs**
- Inform **incentive allocation**
  - Where are the PAMs working and where are they not?
- Help **direct future investment**
  - Towards areas where PAMs are working well

### Using proxy indicators

Volumes of timber or fuelwood extracted

Number of hectares planted

Number of convictions for logging offences

Area of forest under SFM certification

## Key messages

- PAMS are interventions to implement REDD+ activities
- To design PAMs it is necessary to analyse and prioritize drivers and barriers
- There are a range of factors to consider when designing PAMs, including cost and feasibility of implementation
- PAMs should develop in parallel with safeguards

# Country Examples

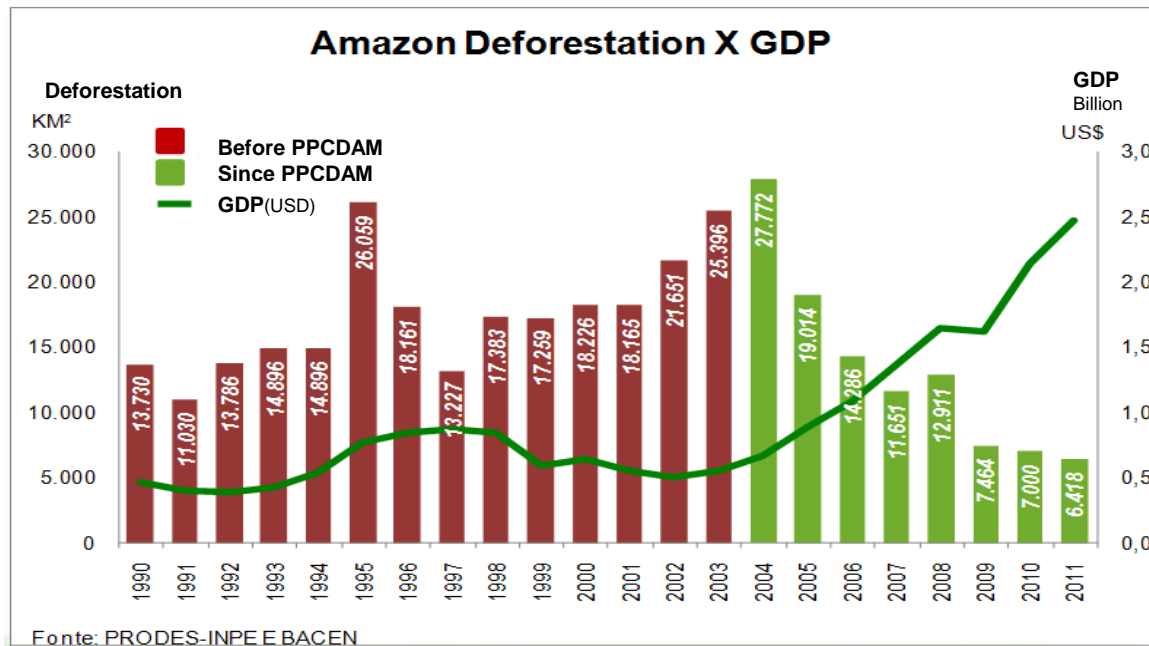

**UN-REDD** | REDD+ ACADEMY  
PROGRAMME

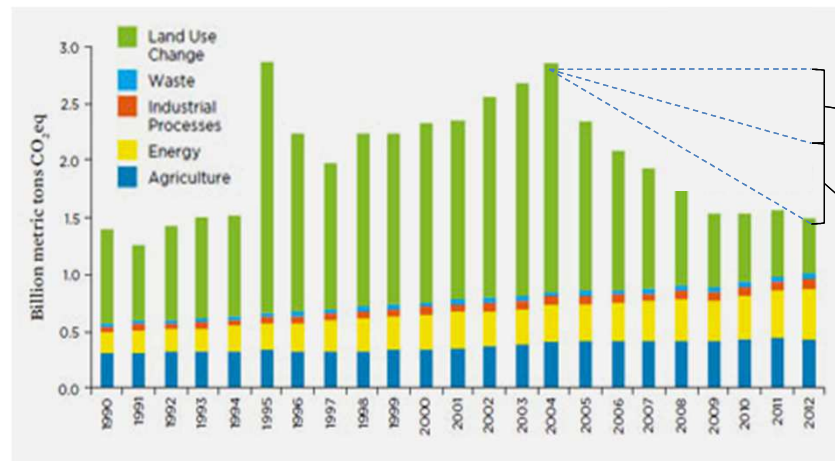

Brazil

**Implementing  
effective PAMs:**  
Reducing deforestation  
– AND sustaining  
economic growth

- **Clear vision**; national strategy that addresses the significant drivers
- **Step-wise approach**: one REDD+ activity + one subnational area
- Embedded into the **national development framework**
- High-level **political support**
- Strong **coordination across sectors & governance levels** (Federal, State, Municipal)

# Brazil's REDD+ PAMs

14

**PAMs:**  $\approx 62,000 \text{ km}^2$   
50% total  $\searrow$ Deforestation

**Falling agricultural prices:**  
 $\approx 62,000 \text{ km}^2$   
50% total  $\searrow$ Deforestation

1. Action Plan for the **Prevention & Control of Deforestation** (2004)
  - Territorial management and land use
  - **Promotion of sustainable practices:** revision of economic incentives for sustainable agriculture & forest management, **better use of already-cleared lands**, and development of sustainable transportation & energy infrastructure
  - Better **monitoring & enforcement**
2. **Two Presidential Decrees:** Legal basis to tackle deforestation
3. **Central Bank Resolution**
  - Provision of **rural credit to farmers based on compliance with environmental regulations**

# Brazilian Amazon deforestation: Summary

- Successful slowing of deforestation resulted from:
  - Better monitoring & **law enforcement**
  - Restrictions on **access to (agricultural) credit** (in areas with highest defor.)
  - Expansion of **protected areas**
  - Interventions in supply chains of soy and beef (major drivers!)
    - Rise in beef yields, reduction of Amazon cattle herd, Soy Moratorium, market rejection of deforesters
  - Working outside of the forestry sector
- But...
  - **Incentives directly to farmers are limited so far**
  - PAMs only for Amazon (scale) deforestation (scope)
  - **Deforestation has increased** in the *Cerrado* area since 2010
  - Need to attract **private investment for sustainable development** of forest, fisheries and agriculture → system cannot rely on punitive approach

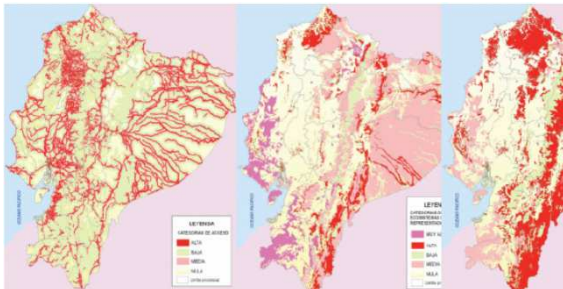

# Ecuador

Incentive policy – the ‘Social Forestry’ programme

Programme currently conserves 1.58m ha of forest; 120,000 people participating; **national government has invested USD 18m**

Incentive structure based on:

- Type of recipient (individual or community)
- Area of forest
- Activity
- Poverty level
- Deforestation risk

20 year agreement, payment on condition of performance, annual monitoring

Funding from **tax receipts**, international donations, REDD+, others

# ASIA PACIFIC

## Common barriers to investments in the “+” activities in Asia-Pacific

- Political and macroeconomic instability
- Weaknesses in judicial systems and weak investor protection
- Weak accountability and transparency
- Costly, lengthy and complex legal frameworks and bureaucratic procedures related to buying, managing, selling and investing in forest land
- Poorly defined and contested rights
- Weak capacity and commitment to improve forest law compliance and reduce illegal forest and trade activities, as well as forest conversion
- Arbitrary changes in policies (e.g., shifting tax policies, changing resource use regulations, imposition of logging bans)

## First steps in overcoming barriers

- Raise awareness among decision-makers regarding the negative impacts of complex regulations and procedures on investment decisions
- Reduce excessive regulatory procedures and bureaucracy
- Enhance accountability and transparency
- Apply best practices in forest law enforcement and reducing illegal activities
- Clarify and strengthen rights to land and forests
- Avoid arbitrary changes and provide stable investment, land-use, land management and forestry policies, laws and procedures

## Hot off the Press (2<sup>nd</sup> October 2015)

- ASEAN countries recognize wildlife and timber trafficking as serious transnational crime requiring regional action
- Wildlife and forest crime will now be considered as important as other crimes needing collective regional action including drug and precursor trafficking, human trafficking and smuggling, terrorism, and arms smuggling
