

Myanmar and Philippines – Country Clinics

Myanmar

1. What is the current status of IPs participation with UN-REDD programme activities in your country?

- IPs women and Leaders workshop supported by AIPP, and we invited people from UNREDD planning areas.
- Findings from the workshops
- 1) women knew that they will get benefit 20% from CF
- 2) women could not link the women rights and the role of women in forest management
- in national law, people cannot stay in forest protected and cannot do shifting cultivations, but land core groups are trying for that to be legally.
- 92% of laws need to be amended
- need to do discussion with IPs in the parliaments
- stakeholders engagement and forest management also still needed
- One of staff from FAO mentioned that they can help in preparing roadmap and they plan to have discussion with Ministry of Environment and planning, forest and agriculture
- Safeguards- released anti-corruption law already
- Myanmar government does not have task force
- Myanmar already done the national workshop related to REDD+ for two times

2. What is the current capacity of IPs to fully and effectively participate in UNREDD programme activities in your country?

- Approach to IPs leaders representatives in the parliaments
- Providing awareness raising (organizing workshop, translating some materials to local languages)
- UNREDD will help for roadmap will be next 4 to 6months
- Before setting up roadmap, we should do stakeholders engagements first
- One of our network WCS also plan to do REDD project in Naga communities , but they mostly focus on youth awareness raising
- WB office is located in Yangon and they invited us to join FCPF program in Chiangmai on next month.

Philippines

Q1 and 2.

- UNREDD program is very new and Ips org took part under forest management bureau.
- UNREDD program is working with PNRSP and it is drafted by CSOs
- Received half a million of UNREDD and has done the role show about REDD+
- We did a research on national forest policy and traditional forest management system

- Most remaining forests are dominant by IPs.
- Engagement in community territorial mapping.
- CSOs do FPIC in Philippines
- FPIC process is manipulated by two companies.
- more than 309 FPIC ,but the companies selected
- organized regional workshop regarding to climate change in REDD(indentify strategies,distributed videos many countries)
- Training related to culturally based approach , using different instruments to strengthen our identity
