

Integrating transparency and accountability in two assessments : Nepal's experience

UN-REDD Information and Knowledge Sharing Session

Geneva, Switzerland 8 December 2013

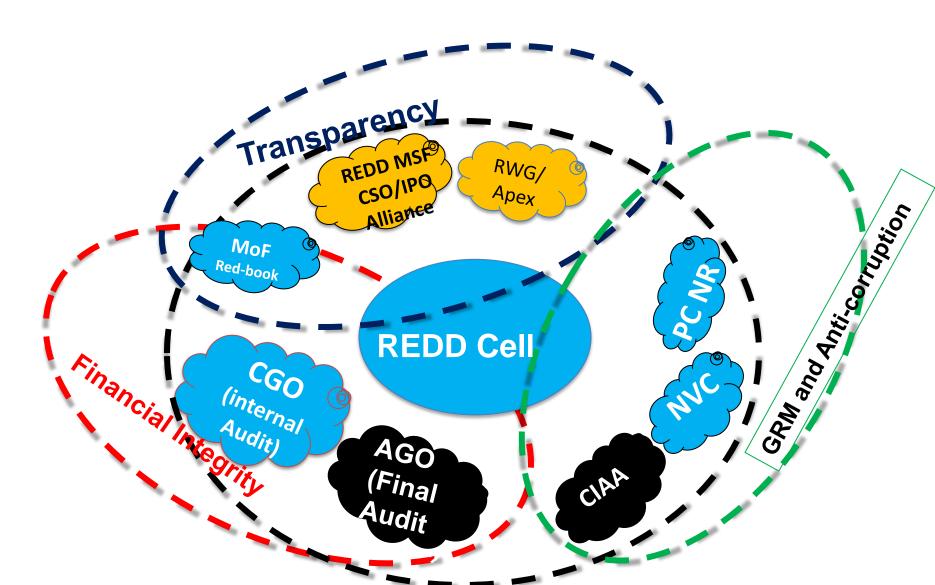

Transparency and Integrity: Institutional frameworks

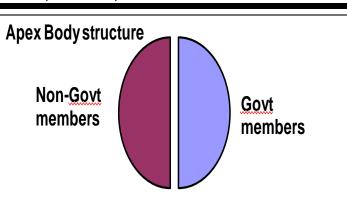

REDD+ in Nepal: a multi-stakeholder led process

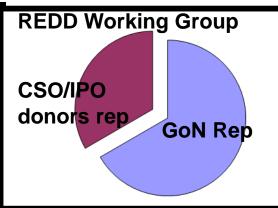

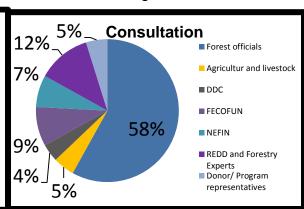

Group work to prioritize drivers of D/D in Western Nepal

Multi-stakeholder consultation meeting in Center

UN-REDD support in 2 critical components

Financial architecture to realize resultsbased finance and incentive mechanisms

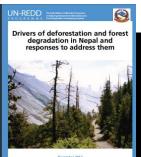

Both components are or can be largely affected by integrity issues

Risks related to miss –allocation and miss management of fund → efficiency, effectiveness and equity risks for REDD+

Failure to improve in governance practices (transparency, accountability and rule of law) accelerate deforestation and forest degradation

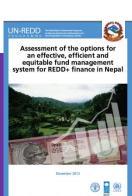

→ Risks effectiveness for REDD+

Study: "Drivers of Deforestation and Forest Degradation and responses to address them in Nepal"

Study: "Assessment of the options for an effective, efficient and equitable fund management system for REDD+ finance in Nepal"

Drivers of D&D

Subsistence

Market

Unregulated Development

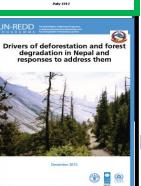

UN-REDD targeted support: contribution to SESA and National REDD+ Strategy

FCPF

GoN

UN-

REDD

Strategies (165 strategic options)

Strategies (wood products demand and supply)

- Policy consistency (reduce frequency of changes, and consistency between sectors)
- Transparency in harvest volumes and pricing
- Forest management to enhance productivity in Tarai
- Equity in CFUGs and operational plans
- Reforms to trade regulations
- Promote value addition in Hills
- Intensive tree planting programme in Tarai
- Improved information and data collection

Sustainable management of forests and Protected Areas

Long-term food security for small and marginal farmers

Environmentally-friendly road construction and maintenance

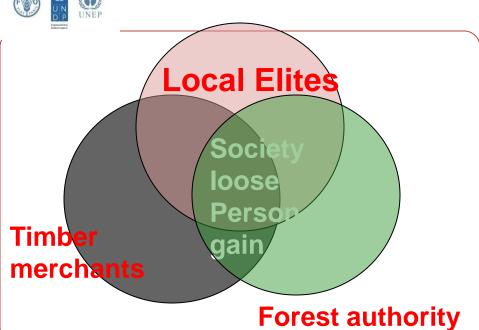

Energy access and efficiency

Governance reform

Strengthened law enforcement

SESA ESMF And National REDD+ Strategy UN-REDD PROGRAMME

illegal logging and control measures

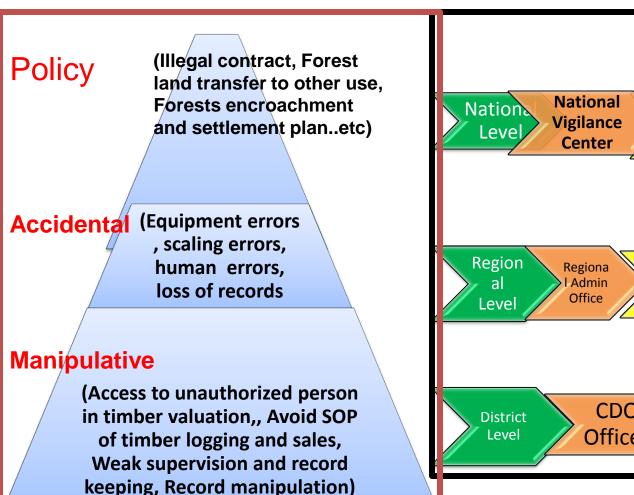

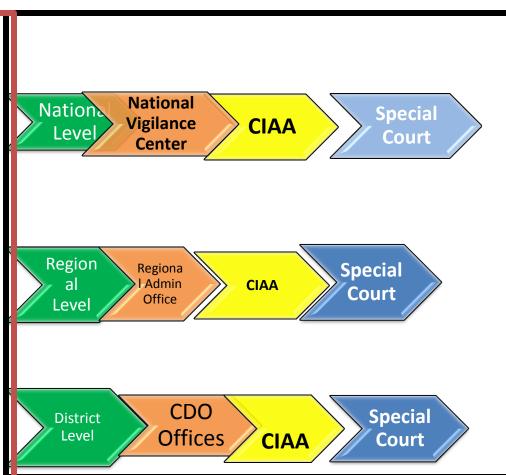

Anti-corruption and GRM

Corruption Risk Hierarchy

Anti-corruption measures

Key consideration from D&D study

- 1. Degradation is extensive and enabled by both negligence and manipulation;
- 2. Policy level corruption is more prevalent in deforestation compared to degradation;
- 3. Information disclosure/reporting system against illegal acts is weak but crucial for follow-up legal action;

Challenges and Opportunities

 Performance of Forestry sector to reduce corruption risk is improving but still room for further improvement in FLEGT;

- Institutional framework and actors to address governance issues do exist. But, capacities and collaborations needs strengthened including outside of Forest institutions;
- National and local institutional contexts are central elements, but strong CSO networks needs to be established and capacitate to detect and expose the corruption risks that are responsible in causing D/D

Call for action

- De-linking of forest officials from timber sales is crucial to reduce corruption risk due to conflict of interest. Therefore, Forest Product sales authority Bill (already drafted by MoFSC) needs to be endorsed and implemented ASAP;
- Take full advantage of multi-stakeholder process to reduce financial risks and reduce potential conflicts in REDD+ benefit sharing;
- There is a need of establishing good information disclosure network to help anti-corruption entities to detect, prevent and suppress the illegal activities. The *flexible* support to enhance awareness and capacity of local stakeholders would be very helpful in this regard;

Thank you
