

UN-REDD support to countries on safeguards and safeguards information systems

Emelyne Cheney, FAO/UN-REDD

**UN-REDD Regional Workshop on Safeguards and Multiple Benefits
Nairobi, Kenya - 17-19th Sept 2013**

Structuring of UN-REDD work on safeguards

Three main areas for UN-REDD safeguards work:

1. Provision of a framework for supporting countries on safeguards
 - Clarifying the role of all existing UN-REDD tools linked to safeguards
2. Support on defining or developing safeguards goals, policies, laws and regulations
 - Help countries to assess their existing policies and compare these to the UNFCCC Cancun safeguards
3. Development and structuring of Safeguard Information Systems (SIS)
 - Help countries to assess their existing systems that may already fulfill some of the functions of a REDD+ SIS

1. Framework for supporting the development of country approaches to safeguards

Institutions

**1. Identification
/development of relevant
safeguards to be addressed
and respected:**
Policies, laws and regulations
(PLRs), either existing or
those created for REDD+

**2. Safeguard Information
System (SIS):**
Existing or new indicators,
methodologies for collecting
information, and framework
for provision of information

Processes and Procedures

Safeguard Policies, Laws and Regulations (PLRs)

- Addressing and respecting the safeguards through the implementation of PLRs
 - Depends on the country-defined objectives
 - Considering the specific potential REDD+ risks and benefits in the country
- Legal framework may not be required
 - E.g., national-level guidelines to promote/support a safeguard as opposed to a policy/law
- May already exist or need to be created

Safeguard Information Systems (SIS)

- Approach for collecting and providing information on how REDD+ safeguards are being addressed and respected throughout REDD+ implementation
- Likely components:
 - Indicators
 - Methodologies for collection of information (e.g., household surveys)
 - Framework for provision of information
- Should build on existing systems to the extent possible

Development of a Country Approach to Safeguards

Stakeholder analysis,
awareness raising
and capacity-
building

Planning the
development of the
country approach to
safeguards

Defining or
developing
safeguard policies,
laws and regulations

Collecting
information on
safeguards

Providing / sharing
information on
safeguards

Clearly define what the safeguards approach is supposed to do:

- interpreting what is contained in the UNFCCC decisions from the country perspective
- consideration of the specific social and environmental risks as well as benefits that might be associated with REDD+ in the country
- Responding to any other goals identified by the country

- Gap analysis of existing country PLRs
 - consider what, if any, PLRs need to be in place to achieve the country's goals
- Determine the effectiveness of existing systems
 - Existing tools can be helpful to assess gaps
- Safeguard policy framework
 - Provides the basis for the country's response to UNFCCC and broader needs

- Ideally follows the objective setting and PLR gap analysis
- National assessment of existing information sources and systems for information-sharing
- Development of indicators
- Information/data methodologies and approaches that address:
 - What data is to be collected (e.g. income data)
 - Methodologies to be used (e.g. household surveys; participatory approaches, such as participatory biodiversity monitoring)
 - Who collects the data
 - Frequency of data collection
 - The scale at which data is collected (e.g. at the country, local or project level)

2. Social and Environmental Principles and Criteria (SEPC)

The SEPC provides a guiding framework to help support countries in developing their approaches to safeguards:

- provides more detailed criteria that can be used to "unpack" the UNFCCC safeguards
- particularly useful at the stage of a country defining the objectives of its approach to safeguards

Social and Environmental Principles

- Apply norms of **democratic governance**, as reflected in national commitments and Multilateral Agreements
- Respect and protect **stakeholder rights** in accordance with international obligations
- Promote **sustainable livelihoods and poverty reduction**
- Contribute to **low-carbon, climate-resilient sustainable development policy**, consistent with national development strategies, national forest programmes, and commitments under international conventions and agreements
- Protect natural forest from degradation and/or conversion
- Maintain and enhance multiple functions of forest including **conservation of biodiversity and provision of ecosystem services**
- Avoid or minimize **adverse impacts** on non-forest ecosystem services and biodiversity

Thank You
